AB	- The aq. dispersions are manufd. by hydrolysis of polymers having N-vinylcarboxylic acid amide units in aq. media by using 1-5 times as mu HNO3 (by mol) as the units. The dispersions are stable and useful as wastewater coagulants, sludge dewatering agents, paper additives, etc. Poly(N-vinylformamide) was hydrolyzed by using 1.0 mol (of N-vinylformamide unit) HNO3 in H2O to give an aq. dispersion contg. polymer particles with size 4-5 .mu.m and having colloid equiv. 5.9 mequiv/g (at pH 4).				
ST	- vinylcarboxamide polymer aq emulsion stability; nitric acid polyvinylformamide hydrolysis; wastewater coagulant polyvinylcarboxamide aq dispersion stability; sludge dewatering polyvinylcarboxamide aq dispersion stability; paper additive polyvinylcarboxamide aq dispersion stability				
IT	- Paper (additives; manuf. of stable aq. dispersions of vinylamine-based polymers by hydrolysis of vinylcarboxamide polymers with HNO3 for)				
IT	- Acid hydrolysis (manuf. of stable aq. dispersions of vinylamine-based polymers by hydrolysis of vinylcarboxamide polymers with HNO3)				
IT	- Coagulation agents Wastewater coagulation Wastewater treatment sludge dewatering (manuf. of stable aq. dispersions of vinylamine-based polymers by hydrolysis of vinylcarboxamide polymers with HNO3 for)				
IT	- 72018-12-3DP, Poly(N-vinylformamide), hydrolyzed 114815-82-6DP, Acrylonitrile-N-vinylformamide copolymer, hydrolyzed RL: IMF (Industrial manufacture); PRP (Properties); TEM (Technical or engineered material use); PREP (Preparation); USES (Uses) (manuf. of stable aq. dispersions of vinylamine-based polymers by hydrolysis of vinylcarboxamide polymers with HNO3)				
IT	- 7697-37-2, Nitric acid, uses RL: NUU (Nonbiological use, unclassified); USES (Uses) (manuf. of stable aq. dispersions of vinylamine-based polymers by hydrolysis of vinylcarboxamide polymers with HNO3)
